

CASCADE HEALTH PARTNERS & MERIDIAN TRUST BANK

Combined Patient Clinical & Customer Financial Records

Shared Data-Sharing Pilot File — June 2026

CLASSIFICATION: RESTRICTED — PROTECTED HEALTH & FINANCIAL INFORMATION

This document contains synthetic test data generated for software evaluation purposes.

All patient names, MRNs, SSNs, account numbers, and clinical details are fictitious.

Table of Contents

- 1. Program Overview
- 2. Clinical Records — Patient Roster
- 3. Clinical Visit Notes (Detailed)
- 4. Insurance & Billing Cross-Reference
- 5. Banking Records — Loan Applicant Roster
- 6. Loan Officer Case Notes
- 7. Combined Household Cross-Reference (Health + Financial)
- 8. Regulatory Context: HIPAA & GLBA Overlap
- 9. Fraud & Risk Flags (Test Scenarios)
- 10. Data Handling & Access Control Appendix

1. Program Overview

Cascade Health Partners is a regional outpatient clinical network based in Denver, Colorado, serving approximately 40,000 patients across four clinics. Meridian Trust Bank is an unaffiliated regional bank that has partnered with Cascade Health Partners on a household financial-wellness pilot program, in which a subset of patients who are also bank customers have consented to a limited data-sharing arrangement so that care coordinators can flag patients experiencing financial hardship that may affect treatment adherence.

This combined test file merges a sample of clinical records from Cascade Health Partners with a sample of loan application records from Meridian Trust Bank, for the same set of overlapping individuals, to exercise privacy middleware against a realistic cross-domain scenario: protected health information (PHI) governed by HIPAA sitting alongside nonpublic personal financial information governed by the Gramm-Leach-Bliley Act (GLBA), in a single ingested document.

All individuals, medical record numbers, Social Security Numbers, account numbers, diagnoses, and financial figures in this file are entirely fictitious and were generated for software testing. No real patient or bank customer data is contained in this document.

1b. Consent & Pilot Program Mechanics

Patients who are also Meridian Trust Bank customers were invited to join the financial-wellness pilot during a routine clinic visit between March and May 2026. Enrollment required signing a dual-authorization form permitting Meridian Trust Bank to transmit a derived hardship flag (see Section 7) to Cascade Health Partners' care coordination team. The form explicitly excludes transmission of account balances, loan amounts, credit scores, or transaction history — only the three-tier flag itself is shared.

Of the six patients represented in Section 2 of this file, four (Eleanor Vasquez-Whitfield, Marcus Ionescu-Bell, Wren Alaoui-Baptiste, and Priyanka Desai-Lindholm) are also represented in the Section 5 banking roster and have signed the dual-authorization form. The remaining two patients (Tobias Nkemelu-Holt and Isolde Kowalczyk-Duarte) are not Meridian Trust Bank customers and appear only in the clinical sections of this file.

Consent may be revoked at any time by the patient through either institution; revocation triggers deletion of the hardship flag from Cascade Health Partners' systems within five business days, per the pilot program's data processing agreement.

2. Clinical Records — Patient Roster

The table below lists patients included in this test file, with medical record number (MRN), date of birth, primary diagnosis, and attending provider, as extracted from the Cascade Health Partners electronic health record system.

Patient	MRN	DOB	Diagnosis	Provider
Eleanor Vasquez-Whitfield	MRN-778214	1958-04-12	Type 2 diabetes mellitus, well-controlled	Dr. Samuel Okafor-Brenner
Marcus Ionescu-Bell	MRN-778215	1990-11-03	Generalized anxiety disorder	Dr. Fatima Rahman-Cole
Wren Alaoui-Baptiste	MRN-778216	1975-02-27	Hypertension, stage 1	Dr. Samuel Okafor-Brenner
Priyanka Desai-Lindholm	MRN-778217	2002-09-18	Seasonal allergic rhinitis	Dr. Fatima Rahman-Cole
Tobias Nkemelu-Holt	MRN-778218	1967-07-30	Post-operative recovery, right knee replacement	Dr. Renata Almeida-Fischer
Isolde Kowalczyk-Duarte	MRN-778219	1985-12-05	Migraine with aura	Dr. Fatima Rahman-Cole
Callum Bratton-Nwosu	MRN-778220	1993-03-21	Mild persistent asthma	Dr. Renata Almeida-Fischer
Seraphina Lund-Okwuosa	MRN-778221	1979-08-14	Hypothyroidism, controlled	Dr. Samuel Okafor-Brenner

Contact & Residential Detail

Patient	Home Address	Phone	Most Recent Visit
Eleanor Vasquez-Whitfield	212 Meadowlark Ln, Denver, CO 80209	303-555-0119	2026-06-02
Marcus Ionescu-Bell	88 Palisade Dr, Denver, CO 80211	303-555-0142	2026-06-03
Wren Alaoui-Baptiste	930 Larimer Ct, Denver, CO 80205	303-555-0178	2026-06-05
Priyanka Desai-Lindholm	44 Cherry Creek Ter, Denver, CO 80206	303-555-0165	2026-06-06
Tobias Nkemelu-Holt	17 Wynwood Pl, Denver, CO 80210	303-555-0187	2026-06-08
Isolde Kowalczyk-Duarte	506 Juniper Row, Denver, CO 80207	303-555-0193	2026-06-09
Callum Bratton-Nwosu	78 Pinehaven Ct, Denver, CO 80212	303-555-0201	2026-06-10
Seraphina Lund-Okwuosa	12 Cobalt Meadow Dr, Denver, CO 80238	303-555-0214	2026-06-11

3. Clinical Visit Notes (Detailed)

Eleanor Vasquez-Whitfield (MRN-778214)

Patient presents for routine diabetes follow-up. A1C stable at 6.8%. Continues metformin 1000mg twice daily. Dr. Samuel Okafor-Brenner notes good adherence and no signs of retinopathy on referral exam. Patient reports mild financial stress related to medication co-pays; referred to care coordination for financial-wellness screening (see Section 7).

Marcus Ionescu-Bell (MRN-778215)

Follow-up for generalized anxiety disorder. Patient reports improved symptoms on current sertraline dose. Dr. Fatima Rahman-Cole continues current treatment plan and recommends continued biweekly therapy sessions with the behavioral health team.

Wren Alaoui-Baptiste (MRN-778216)

Blood pressure well-controlled at 128/82 on current lisinopril regimen. Dr. Samuel Okafor-Brenner notes patient recently took out a small business loan (see Section 5) and reports increased work-related stress; advised on stress-management resources.

Tobias Nkemelu-Holt (MRN-778218)

Six-week post-operative visit following right total knee replacement. Dr. Renata Almeida-Fischer reports excellent range of motion and clears patient for return to normal activity. Physical therapy to continue twice weekly for four more weeks.

Isolde Kowalczyk-Duarte (MRN-778219)

Patient reports two migraine episodes in the past month, both resolved with sumatriptan. Dr. Fatima Rahman-Cole discusses preventive therapy options given increasing frequency and will reassess in eight weeks.

Eleanor Vasquez-Whitfield (MRN-778214)

Follow-up call one week later: patient's HELOC (see Section 5) was approved, which she reports has resolved the immediate co-pay affordability concern. Care coordinator Priya Okonkwo-Reyes-Danto notes the hardship flag for this patient should be reassessed at next sync.

Tobias Nkemelu-Holt (MRN-778218)

Physical therapy progress note: patient tolerating twice-weekly sessions well, reports no pain at rest and mild discomfort only with stairs. Physical therapist Renee Duclos-Amadi recommends continuing current plan of care through end of July 2026.

Callum Bratton-Nwosu (MRN-778220)

Annual asthma review. Peak flow readings within normal range; patient reports good adherence to albuterol rescue inhaler and no ER visits in the past twelve months. Dr. Renata Almeida-Fischer renews prescription and schedules routine follow-up in twelve months.

Seraphina Lund-Okwuosa (MRN-778221)

Routine thyroid function follow-up. TSH within target range on current levothyroxine dose. Dr. Samuel Okafor-Brenner notes no dose adjustment needed and schedules next labs in six months.

4. Insurance & Billing Cross-Reference

The table below cross-references each patient's insurance policy number with their most recent visit, for reconciliation against Cascade Health Partners' billing system.

Patient	Insurer	Policy Number	Visit Date
Eleanor Vasquez-Whitfield	Cascade Health Plan	CHP-3391847	2026-06-02
Marcus Ionescu-Bell	Cascade Health Plan	CHP-3391902	2026-06-03
Wren Alaoui-Baptiste	Summit Mutual Insurance	SMI-8820174	2026-06-05
Priyanka Desai-Lindholm	Cascade Health Plan	CHP-3392015	2026-06-06
Tobias Nkemelu-Holt	Summit Mutual Insurance	SMI-8820261	2026-06-08
Isolde Kowalczyk-Duarte	Cascade Health Plan	CHP-3392188	2026-06-09
Callum Bratton-Nwosu	Summit Mutual Insurance	SMI-8820340	2026-06-10
Seraphina Lund-Okwuosa	Cascade Health Plan	CHP-3392260	2026-06-11

Billing disputes are handled by the Cascade Health Partners Patient Financial Services team and are not shared with Meridian Trust Bank under the pilot program's data-sharing agreement, which is strictly limited to the financial-hardship flag described in Section 7.

5. Banking Records — Loan Applicant Roster

The table below lists Meridian Trust Bank loan applicants included in this test file. Account numbers follow the bank's internal TESTACCT numbering convention used exclusively in non-production environments.

Applicant	SSN	Account No.	Loan Type	Amount	Credit Score	Status
Eleanor Vasquez-Whitfield	888-21-4470	MTB-TESTACCT-004471	Home Equity Line of Credit	\$45,000	742	Approved
Marcus Ionescu-Bell	889-64-2381	MTB-TESTACCT-004488	Auto Loan Refinance	\$18,300	689	Under Review
Wren Alaoui-Baptiste	890-77-1029	MTB-TESTACCT-004502	Small Business Loan	\$120,000	718	Approved
Priyanka Desai-Lindholm	891-05-6643	MTB-TESTACCT-004519	Student Loan Consolidation	\$62,750	701	Denied - insufficient income
Callum Bratton-Nwosu	892-38-7715	MTB-TESTACCT-004531	Personal Loan	\$9,500	664	Approved

Contact Detail & Loan Officer

Applicant	Email	Phone	Loan Officer
Eleanor Vasquez-Whitfield	e.vasquezwhitfield@mailtest.example	303-555-0119	Bianca Solheim-Okoro
Marcus Ionescu-Bell	m.ionescubell@mailtest.example	303-555-0142	Bianca Solheim-Okoro
Wren Alaoui-Baptiste	w.alaoubaptiste@mailtest.example	303-555-0178	Desmond Yarborough-Ita
Priyanka Desai-Lindholm	p.desailindholm@mailtest.example	303-555-0165	Desmond Yarborough-Ita
Callum Bratton-Nwosu	c.brattonnwosu@mailtest.example	303-555-0201	Bianca Solheim-Okoro

6. Loan Officer Case Notes

Eleanor Vasquez-Whitfield (MTB-TESTACCT-004471)

HELOC approved at 45,000 dollar limit, 7.2% variable rate. Bianca Solheim-Okoro notes strong payment history on existing mortgage and stable income from part-time consulting work. Funds intended for home accessibility renovations.

Marcus Ionescu-Bell (MTB-TESTACCT-004488)

Auto loan refinance under review pending updated income verification. Bianca Solheim-Okoro flags debt-to-income ratio of 38%, near the bank's 40% threshold; requested most recent two pay stubs before final decision.

Wren Alaoui-Baptiste (MTB-TESTACCT-004502)

Small business loan approved for 120,000 dollars at 8.1% fixed, secured against business assets. Desmond Yarborough-Ita notes three years of consistent revenue growth in the applicant's landscaping business as the primary approval driver.

Priyanka Desai-Lindholm (MTB-TESTACCT-004519)

Student loan consolidation denied due to insufficient verifiable income relative to requested consolidation amount. Desmond Yarborough-Ita recommends applicant reapply with a co-signer or after six additional months of employment history.

Callum Bratton-Nwosu (MTB-TESTACCT-004531)

Personal loan approved for 9,500 dollars at 11.4% fixed, intended for consolidating existing credit card balances. Bianca Solheim-Okoro notes credit score of 664 is below the bank's preferred tier but approved given stable two-year employment history and debt-to-income ratio of 29%.

6b. Clinic & Branch Locations Reference

For completeness, this reference section lists the physical locations associated with both organizations represented in this file. It contains no individual patient or customer data and is included to test that document-processing pipelines correctly distinguish organizational/facility information, which is not personally identifiable, from the individual-level records found elsewhere in this file.

Facility	Type	Address	Primary Contact
Cascade Health Partners — Downtown Clinic	Clinic	500 17th St, Denver, CO 80202	Clinic Manager: Front Desk
Cascade Health Partners — Park Hill Clinic	Clinic	2929 Colfax Ave, Denver, CO 80206	Clinic Manager: Front Desk
Meridian Trust Bank — Downtown Branch	Bank Branch	1801 California St, Denver, CO 80202	Branch Manager: Teller Line
Meridian Trust Bank — Cherry Creek Branch	Bank Branch	150 Steele St, Denver, CO 80206	Branch Manager: Teller Line

7. Combined Household Cross-Reference (Health + Financial)

Under the pilot program's data-sharing consent, Cascade Health Partners care coordinators receive a single binary financial-hardship flag from Meridian Trust Bank for consenting patients, without receiving underlying loan amounts, credit scores, or account numbers. The table below represents the internal reconciliation record used to build that flag and is more detailed than what is actually shared with clinical staff — it is included here specifically to test that privacy middleware correctly restricts cross-domain fan-out (i.e., that a clinical-side query should never surface banking account numbers, and a banking-side query should never surface diagnoses).

Individual	MRN	Bank Account No.	Hardship Flag	Basis
Eleanor Vasquez-Whitfield	MRN-778214	MTB-TESTACCT-004471	Low	Approved HELOC, stable payment history
Marcus Ionescu-Bell	MRN-778215	MTB-TESTACCT-004488	Moderate	DTI near threshold, refinance pending
Wren Alaoui-Baptiste	MRN-778216	MTB-TESTACCT-004502	Low	Approved business loan, revenue growing
Priyanka Desai-Lindholm	MRN-778217	MTB-TESTACCT-004519	High	Loan denied, insufficient income

8. Regulatory Context: HIPAA & GLBA Overlap

This file intentionally combines two categories of regulated data governed by different U.S. federal frameworks. Protected Health Information (PHI), as defined under the Health Insurance Portability and Accountability Act (HIPAA), includes the diagnoses, provider names, MRNs, and visit notes found in Sections 2–4. Nonpublic Personal Information (NPI), as defined under the Gramm-Leach-Bliley Act (GLBA), includes the SSNs, account numbers, credit scores, and loan details found in Sections 5–6.

A privacy middleware layer evaluated against this file should be able to (1) correctly classify each identifier by its governing regime, (2) apply HIPAA's minimum-necessary standard when a clinical user queries the document, ensuring no NPI is surfaced, (3) apply GLBA's permissible-purpose restrictions when a banking user queries the document, ensuring no PHI is surfaced, and (4) correctly handle Section 7, which is the only section authorized to combine a derived signal (the hardship flag) across both domains, under the specific consent described there.

9. Fraud & Risk Flags (Test Scenarios)

The following synthetic risk scenarios are included to test how a privacy-preserving RAG system handles queries that combine identity verification across domains — a common fraud-investigation pattern.

Scenario A: A support call was received on 2026-06-10 from a caller claiming to be Marcus Ionescu-Bell, requesting a change to the mailing address on file for account MTB-TESTACCT-004488. The caller could not verify the last four digits of the SSN on file (correct value ends in 2381) and the request was declined pending in-branch identity verification, per Meridian Trust Bank fraud policy FR-12.

Scenario B: Cascade Health Partners billing flagged a duplicate insurance claim submitted under policy number CHP-3392015 (Priyanka Desai-Lindholm) on two different dates for what appears to be the same visit. The claim was routed to the billing integrity team for review; no determination of fraud has been made as of this file's export date.

Scenario C: On 2026-06-12, a query was submitted through the clinic's patient portal chatbot asking about 'the loan status for the patient in room 4', apparently conflating an in-clinic conversation with banking data the chatbot should never have access to under the clinical_staff role. The query was correctly rejected by the pilot middleware with an access-denied response, and the event was logged for compliance review. This scenario is included specifically to test refusal behavior for out-of-scope cross-domain requests, as distinct from Scenarios A and B, which test correct handling of in-scope requests.

These scenarios are useful for testing whether a system correctly treats a partial identifier match (e.g., the caller's inability to verify the last four SSN digits) as a security-relevant fact without ever echoing back the full SSN in its response, and whether it correctly refuses queries that fall outside a role's authorized scope entirely, rather than attempting to answer with partial information.

9b. Sample Cross-Domain Query Audit Log

The table below is a sample of the query audit log format that a privacy middleware layer should produce when this file is used as a knowledge base. It is provided as a reference schema, not as real system output, so that a middleware implementation can be checked against an expected logging shape.

Timestamp	User Role	Query Topic	Entities Masked	Entities Reconstructed
2026-06-11 09:14	clinical_staff	Diabetes follow-up status	1 patient name, 1 MRN	0 (role-restricted)
2026-06-11 09:22	loan_officer	HELOC approval status	1 applicant name, 1 SSN	1 name (role-authorized)
2026-06-11 10:03	care_coordinator	Hardship flag basis	1 patient, 1 account no.	1 patient name only
2026-06-11 11:47	compliance_officer	Full record audit	0 (full access)	All (logged)

Note that even for the compliance_officer role, which has full access, the expected behavior is that every reconstruction event is still logged — full access does not mean unlogged access.

10. Data Handling & Access Control Appendix

Role	Access Scope
clinical_staff	Read access to Sections 1–4 only. No access to Sections 5, 6, or the account-number column in Section 7. May see the
care_coordinator	Read access to Sections 1–4 and the full Section 7, including basis, to support care planning. No access to Sections 5 or
loan_officer	Read access to Sections 1, 5, and 6 only. No access to Sections 2, 3, 4, or 9-Scenario-B. May access Section 9-Scenario
compliance_officer	Full read access to all sections for audit purposes, with all access logged.
bank_customer_support	Read access to Section 5 contact/account rows for the specific customer on an active call only, with no bulk export capa

11. Synthetic Data Conventions Used in This File

To support safe, repeatable testing, all identifiers in this file follow deliberate synthetic conventions rather than being drawn from or resembling any real individual's data.

Social Security Numbers in the clinical-adjacent banking records (Section 5) use the 88x–89x prefix range; SSNs elsewhere in the broader test corpus use the 90x–96x prefix range. The Social Security Administration has never issued numbers with an area number of 900–999, and 888/889 area numbers are likewise not in general circulation, so these values cannot collide with a real person's SSN.

Bank account numbers use the literal prefix 'MTB-TESTACCT-' followed by a six-digit sequence number, which does not conform to any real account-numbering scheme used by an actual financial institution. Medical record numbers use the literal prefix 'MRN-' followed by a six-digit sequence. Phone numbers use the 303-555-01xx and 412-555-0xxx ranges, both of which fall within the North American Numbering Plan's reserved '555' exchange used for fictional numbers in media and testing. Email addresses use the '.example' top-level domain reserved by IANA for documentation and testing purposes.

A privacy middleware implementation should still detect and mask all of these values as if they were real PII/PHI/NPI — the synthetic conventions above exist purely so that the test author and reviewers can confirm no real personal data was inadvertently used, not to signal to the system under test that the values are fake.

12. Revision History

This test file has been revised across several iterations as new test scenarios were added. The table below tracks those revisions for reference during middleware regression testing.

Version	Date	Change Summary
v1.0	2026-05-02	Initial draft with 4 patients and 3 loan applicants.
v1.1	2026-05-20	Added Section 7 combined household cross-reference and consent mechanics.
v1.2	2026-06-05	Added fraud/risk scenarios A and B; added regulatory context section.
v1.3	2026-06-15	Added two additional patients, one additional loan applicant, fraud scenario C, and synthetic data conventions section.

Glossary of Terms Used in This File

PHI — Protected Health Information under HIPAA — individually identifiable health information, including diagnoses, treatment notes, and MRNs.

NPI (financial) — Nonpublic Personal Information under GLBA — financial information such as account numbers, balances, and credit scores not otherwise publicly available.

MRN — Medical Record Number — a unique identifier assigned to a patient within a healthcare provider's system.

DTI — Debt-to-Income ratio — a lending metric comparing an applicant's monthly debt payments to monthly gross income.

Hardship flag — A derived, low-granularity signal (Low/Moderate/High) shared across the health-finance pilot program in place of raw financial data.

Closing Notes for Test Evaluators

This file was constructed to give a privacy-preserving middleware layer a realistic mix of surface forms: structured tables (rosters, cross-references, audit logs), semi-structured entries (visit notes, case notes, meeting-style scenarios), and pure narrative prose (the overview, regulatory context, and consent sections). A complete evaluation should test each surface form independently, since PII detectors that perform well on tabular data do not always generalize to identifiers embedded in free-text narrative, and vice versa.

Evaluators are encouraged to pair this file with the accompanying question-and-expected-answer set, which exercises single-field lookups, cross-section reasoning, role-based access boundaries, and refusal behavior for out-of-scope queries.

Finally, evaluators should confirm that no verbatim SSN, account number, or MRN from this file is ever echoed back in a system's response to a role that is not authorized to see it — even partially, such as in a masked-but-still-partially-visible form like 'ending in 2381' — unless that partial disclosure is itself part of an explicitly authorized workflow, as in Fraud Scenario A in Section 9.

End of document. All patient, clinical, and financial data above is synthetic and generated solely for testing document ingestion, PII/PHI/NPI detection, tokenization, and cross-domain access-control logic.
